CaseModel

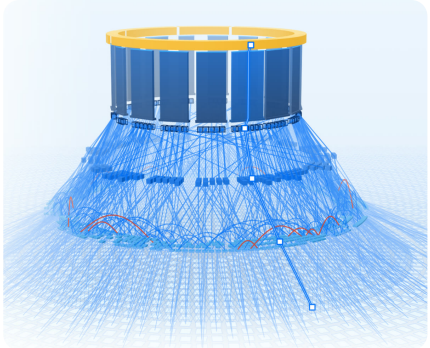
LITIGATION PLATFORM FOR LAW FIRMS AND FUNDERS

The case is built.

CaseModel reads every document in a dispute and builds the whole case as one connected model. Every dollar claimed is joined to the sentence that proves it.

A case is made of connections between pages. Today they meet in someone's head, so the case that gets built is the case someone remembered.

In daily use on live commercial litigation.



One case as one model, from the pages up to the claim.

Eight capabilities, in the order a case runs.

1 Know what happened

Exhaustive Evidence
Every source collected whole. Every page read twice.

Factual Mapping
Who did what, when, and on whose authority.

2 Build your case

Case Construction
From the page to the claim, element by element, in the statute's own words.

3 Test theirs

The Public Record
What they said in public, captured for court.

Affidavit Scrutiny
Every affidavit read against the record.

Evidence Forensics
Every document they produce, tested.

4 Stay ahead

Gap Analysis
Where you are thin, and who can close it.

Dynamic Playbook
The next moves, and the claim revalued.

Every dollar traces to the sentence that proves it.

Head of loss	Lost profit and goodwill, $61.5m
Cause of action	Misleading or deceptive conduct
Element	Was the conduct misleading or deceptive?
Fact	170 of the 420 vehicles went to the Financier
Dated event	13 November 2023
Page	MFR.0231, page 1: "Consigned to the Financier 170"

An invented worked example: The Importer v the Manufacturer.

It does a different job from the tools you have.

Review platforms	**Find, code and produce documents.** The case itself is still built by hand.
Legal assistants	**Answer the question you ask, or draft from what you give them.** Nothing holds the case together between one question and the next.
CaseModel	**Builds the case itself, and keeps it built.** One model, from every page to the claim, kept current with each filing, with the other side's evidence tested against it.

It shows its working, and people decide.

- ✓ **Every quotation is checked against its page.** Every reference opens the page it cites.
- ✓ **Nothing changes without a person.** CaseModel proposes. The legal team running the matter accepts or declines.
- ✓ **One case, one model, held in Australia.** Its material is never shared, and never used to train another.
- ✓ **It shows what the evidence supports, and what it does not yet.** The judgment stays with the people running and backing the case.

From first access to a built case, overnight.

1. **Connect.** Authority to collect is recorded first. Then read-only connections to Microsoft 365, Google Workspace and your review platform.
2. **Read.** Every page is read twice and every event dated. Even for a large matter, the evidence is read overnight.
3. **Built.** The case is built within minutes, from the documents up to the heads of loss.
4. **Run.** As filings arrive the case moves with them.

LAW FIRMS

Know your case better than anyone in the room.

Pleadings that stand on their pages, their evidence tested the day it is filed, and your own gaps found before the other side finds them.

LITIGATION FUNDERS

Fund the case on the record.

A claim assessed overnight, every figure checkable to its page, and a value that moves with each filing across your portfolio.

See CaseModel on a matter of your own. It starts with one question: what would you ask your case, if it could answer?
